

Foundations of Programming and Software Engineering

Day 1 Overview

Day 1 Topics

Review (from set-up):

- Creating conda environments
- Installing packages using conda

Objectives:

- Learn to change directories, print the current directory, and move files on the command line.
- Use the version control software, git, on the command line to track changes and collaborate on a project.
- Contribute to a shared repository by developing on a branch and opening a [pull request](#).
